

Table of contents

- p. 9 Preface by Giuseppe Martino Di Giuda
- 13 Chapter 1
The challenges of designing for construction in the digital era
- 19 Chapter 2
The construction management evolution through history at a glance. Challenges and methodologies for building production optimization
 - 2.1. Design and construction in Ancient times, 20
 - 2.2. From the Modern Era to the First Industrial Revolution, 30
 - 2.3. The emergence of standardized process methodologies during the Second Industrial Revolution, 35
 - 2.4. Towards the 5.0 industry, and the BIM fourth wave, 36
 - 2.5. Conclusions, 45
- 53 Chapter 3
Managing the complexity of the construction sector in the Digital Age
 - 3.1. Defining complexity for construction management: brief reflections and lessons learned from Nobel Parisi's research, 56

	3.2. Strategies for managing the complexity of architectural project implementation, 66
	3.3. Conclusions, 75
p. 79	Chapter 4
	<i>Improving productivity by managing complexity in Agile way. The Construction Productivity Graph (CPG)</i>
	4.1. Methodology explained, 88
	4.2. BIM Model validation process through microservices and definition of resources involved, 89
	4.3. LBM reference table creation, 93
	4.4. Resource management and representation, 96
	4.5. Results, 101
	4.6. Conclusions: potential of the experimental methodology in optimizing realization processes, 103
